

Industry

Engineering Consultancy Coenradie has a single-minded focus: to provide world-class surveying solutions for the offshore, (petro) chemical and construction industries.

Working all around the world, our highly experienced surveyors undertake every type of technical survey – particularly in the fields of steel construction, ship building/repair, machinery/equipment manufacture, marine surveying and surveys for the process industry.

Our team of expert land surveyors also create the highest quality data for governments, developers, constructors and architects.

And Coenradie site surveyors and 3D specialists deliver top quality services in ground, water and civil engineering projects.

Whatever the project, the equipment we use is top class (described as “second to none” by our clients). Devices include: the Leica TS30 total station, Leica C10 Laser Scanner, Faro Ion Laser Tracker and Fixture Alignment Lasers as well as GNSS/GPS. We also offer specialist proprietary surveying software which ensures value for money while guaranteeing the highest levels of quality for every project.

In fact, our commitment to quality is total, reflected in our professional approach to every aspect of our business. It is our priority in everything we do and ISO9001 certification was simply a natural consequence of this approach.

So, when there's no room for compromise, make no mistake: choose Coenradie for truly world-class surveying solutions.
